TECH BRIEF

PALSUN® Polycarbonate Sheet (4.5 mm and Thicker)

TECH BRIEF: 813

ANSI Z97.1-2009
Approval for Use in Exterior Applications

Specifications:

Definition of Specification:
This standard establishes the specifications and methods of test for the safety properties of safety glazing materials (glazing materials designed to promote safety and reduce the likelihood of cutting and piercing injuries when the glazing materials are broken by human contact) as used for all building and architectural purposes.

One purpose in the development of this standard is to provide a single functional test that will simulate such human contact as normally results in cutting and piercing injuries. The performance of each safety glazing material is evaluated by impacting in the normally installed position. The test should be conducted from the direction that human impact would occur. Only such auxiliary tests as are considered necessary to evaluate the continued performance level, are used in the case of glazing containing organic material.

Testing Criteria Required for Approval of Plastic Glazing in Outdoor Applications:

Indoor Aging Testing
- Prior to impact testing, the test specimens are subjected to 480 complete cycles of warm, humid and dry conditions. One cycle includes 24 hours at 140°F and 88% relative humidity followed by 24 hours at 140°F in a dry oven. In between these cycles the material is brought to room temperature for 30 minutes. Samples are weighed and dimensionally measured after each conditioning point.

Impact Testing
- Impact the glazing sample with a 100 lb. bag from a drop height of 48" without fracture of the plastic glazing.

Weathering Testing for Outdoor Use Approval
- Accelerated exposure per ASTM D2565 exposed to 3000 hours of Xenon Arc type lamp followed by Method B Charpy Impact test per ASTM D6110. Impact strength shall not be reduced by more than 25% versus the control sample.

In as much as Palram Americas, Inc. has no control over the use to which others may put the material, it does not guarantee that the same results as those described herein will be obtained. Each user of the material should conduct his/her own tests to determine the material’s suitability for his own particular use. Statements concerning possible or suggested uses of the materials described herein are not to be construed as constituting a license under any Palram Americas, Inc. patent covering such use or as recommendations for use of such materials in the infringement of any patent. Palram Americas, Inc. or its distributors cannot be held responsible for any losses incurred through incorrect installation of the material. In accordance with our Company policy of continual product development you are advised to check with your local Palram Americas, Inc. supplier to ensure that you have obtained the most up to date information.

PALSUN sheets 4.5mm and thicker meet the requirements of:
- ANSI Z97.1-2009 for Outdoor Exposure
- CPSC 16 CFR 1201 - Category I and II
